

Right on the Money

For government agencies that collect revenues from utilities, licensing, and other fee-based services, CSI's billing and revenue management family of software provides advanced tools for managing customers, addresses, and other pertinent information. Comprehensive reporting, cross-module sharing and the ability to integrate with e-commerce solutions for online payments are among the standard features available. This solution is fully integrated with our powerful financial management suite.

Billing and Revenue Management Software

Powerful software designed for the public sector

- **Utility Billing:** Our utility billing module includes features such as customizable account records, flexible reporting options, handheld interface, unlimited rate schedules and charge calculations. Complex rate structures are supported. Every facet of the billing process may be adjusted to meet your specific needs. The Work Order component includes Service Orders, Meter Maintenance history and Scheduling.
- **Business License:** Record and store data related to business license processing including business demographics, classifications, emergency contact information and unlimited notes. The system provides automatic calculation of both variable and flat rate license fees based on user-defined rate tables. An online inquiry makes retrieval of historical data quick and easy. Applications and business license can be printed on stock paper and selected information printed can be user-defined. Hospitality fees and accommodations tax are seamlessly integrated.
- **Tax Manager:** The Tax Manager application provides the tools to track property taxes owed to the municipality, produce tax notices, and report delinquent taxes. Typically, tax information is downloaded from the county tax system, applicable tax rates are applied and then bills and tax digest are printed.
- **Construction Permits:** This module automatically calculates a variety of permit fees based on user-defined rate tables. Fees can be based on construction values or by selecting items from a predefined list of fee items. Maintain and display history of inspection dates, inspection notes, permit payments, etc. All permits are related to a property location which allows a permit history to be viewed or printed. Verify that contractors have a valid business license through integration with CSI Business License application.
- **Accounts Receivable:** Accounts Receivable allows users to create invoices and better manage accounts. Recurring fixed charges, such as rents, garbage pickup, membership dues, etc. can be defined for each customer and automatically posted to the customer's account at the end of each billing cycle. Detailed invoices can be generated and automatically updated to the customer's account. Supports customer payments by bank draft.
- **Cash Collections:** This module provides a centralized and easy way to collect revenue from Utility Bills, Property Taxes, Licensing, and Permits; then instantly generate receipts and update the general ledger. The Daily Receipt Report allows users to quickly balance cash drawers at day's end.
