

Design and Optimize Network Infrastructure

Cave exploring can be a hazardous activity without the proper equipment, skills, and judgment. For cavers, a good plan and a reliable light source are the most important tools. In the technology wilderness, infrastructure design is your map and CSI is the light source to guide your way. CSI's experts help map new designs, integrate new projects with existing infrastructure and plan for the future.

In today's workplace, reliable connectivity and collaboration are a vital part of an organizations success. Network infrastructure must be continually evaluated. Networks should not only meet today's needs, but also anticipate future expansion. CSI can help improve network efficiency, reduce network complexity, enhance network availability and reliability, and help keep up with the latest technologies and new business needs.

Other CSI Gear Products and Services

- Financial Management Software
- Billing and Revenue Management Software
- Lesson Planning Software
- School Activity Accounting Software
- Automated Workflow
- Interactive Classroom
- IP Telephony
- IP Video Surveillance
- Visual Communications
- Wireless Solutions
- Network Security and Traffic Monitoring
- Network Management
- Hardware Solutions
- Engineering Services

Management Services

- Database and Application Management
- Performance Collection and Reporting
- Configuration and Change Management
- Problem and Incident Management
- Inventory, Asset Management and Control

Server Infrastructure

- High Availability Clustering Assessment and Design
- Server Consolidation Assessment and Design

Storage Infrastructure

- Enterprise Backup and Recovery (EBR)
- E-mail Archiving Solutions
- Information Lifecycle Management (ILM)
- Information Management (IM)
- Networked Storage
- Protecting, Mobilizing, Migrating, Archiving and Replicating Information
- Storage Strategy Blueprint and Assessment
- Storage Resource Management (SRM)

Network Infrastructure

- IP Telephony
- Audio Visual Communications
- Local and Wide Area Networks
- Wireless Mobility
- Virtual Private Networks (VPN)
- Optical Networking
- Traffic Engineering
- IP Multicasting
- Remote Access
- Equipment Staging and Deployment
- IP Video Surveillance

Security Infrastructure

- Security Diagnostic Assessment (SDA)
- Security Program Development
- Security Policy Review and Development
- Security Vulnerability Assessment and Management
- Security Technology Assessment (STA)
