

Stay on the Defensive

The Iditarod Trail is full of twists, turns, steep banks, icy hills and long stretches across the desolate tundra. Musherers need the right gear and multiple layers of clothing to protect them from the elements. Today's technology-filled environment presents perils too. If you don't have the equipment to protect and secure your organization, it can fall prey to harsh elements like hackers and viruses.

Don't let the bad guys get you. CSI can set you up with firewall security and traffic monitoring to keep your network systems healthy and running at peak efficiency. E-mail security, spyware and spam protection are also available to protect both the network and end-user computers from unwanted malware.

Do people question your network security?

The experts at CSI can help you decide if you have adequate network protection. Malware is any hardware, software, or firmware that is intentionally included or inserted in a system for a harmful purpose. It has become an increasing concern for network administrators. Below, we've included some questions to consider about the security of your network and components:

- **Spyware Protection:** Did you know that Spyware is no longer the pesky little bug found on your home PC, but has mutated into a serious enterprise threat?
- **Content Filtering:** Do you know what is being viewed online by your employees, staff, or students?
- **E-mail Security:** Are you protected against one of the most frequent methods of virus distribution?
- **Spam Protection:** Is your organization losing productivity because employees spend valuable time each day eliminating a multitude of unwanted e-mails?
- **Firewall Security:** Do you have proven protection from hackers and other unknown threats to your network?
- **VPN:** Need a solution for providing remote application and data access to your network while maintaining an encrypted security wall?
- **Traffic Monitoring:** "Why is the Internet so slow today?" Is this a common question within your organization? You may need a device to monitor network traffic.
- **Instant Messaging:** Can you risk the liability of employees sharing company secrets or personal data via instant messaging?
