

Freedom and Mobility: Essential Components in Today's Workplace

Today, people are on the move more than ever. We want the freedom to access the information we need, when and where we need it. Most of us just don't want to be confined to a desk anymore. That's where CSI's wireless solutions come in. Like an earthbound trekker who discovers the exhilaration of hang gliding, you won't be tied down with a wired connection. If you're considering going wireless, CSI's certified experts can complete a needs assessment and find the right solution for you, whether it's WLAN, WWAN, or WiMAX.

There are many reasons to deploy a wireless solution. School districts are concerned with equity in learning and have developed programs to send laptops home with students. With a wireless WAN or WiMAX solution, now students not only have access to a computer at home, but also to the unlimited, educational resources of the Internet. With a wireless solution, your school district will take another step toward putting all students on equal footing.

Many cities and towns are deploying wireless solutions for a variety of reasons. Wireless is an affordable way to connect multiple buildings within a municipal complex. And for police and other public safety departments, wireless provides access to vital information. CSI is working with local governments to provide law enforcement officers with laptop-equipped vehicles that have the ability to securely send and receive reports, photos and critical crime-fighting data using designated hot spots.

Other CSI Gear Products and Services

- Financial Management Software
- Billing and Revenue Management Software
- Lesson Planning Software
- School Activity Accounting Software
- Automated Workflow
- Interactive Classroom
- IP Telephony
- IP Video Surveillance
- Visual Communications
- Network Security and Traffic Monitoring
- Infrastructure Design
- Network Management
- Hardware Solutions
- Engineering Services

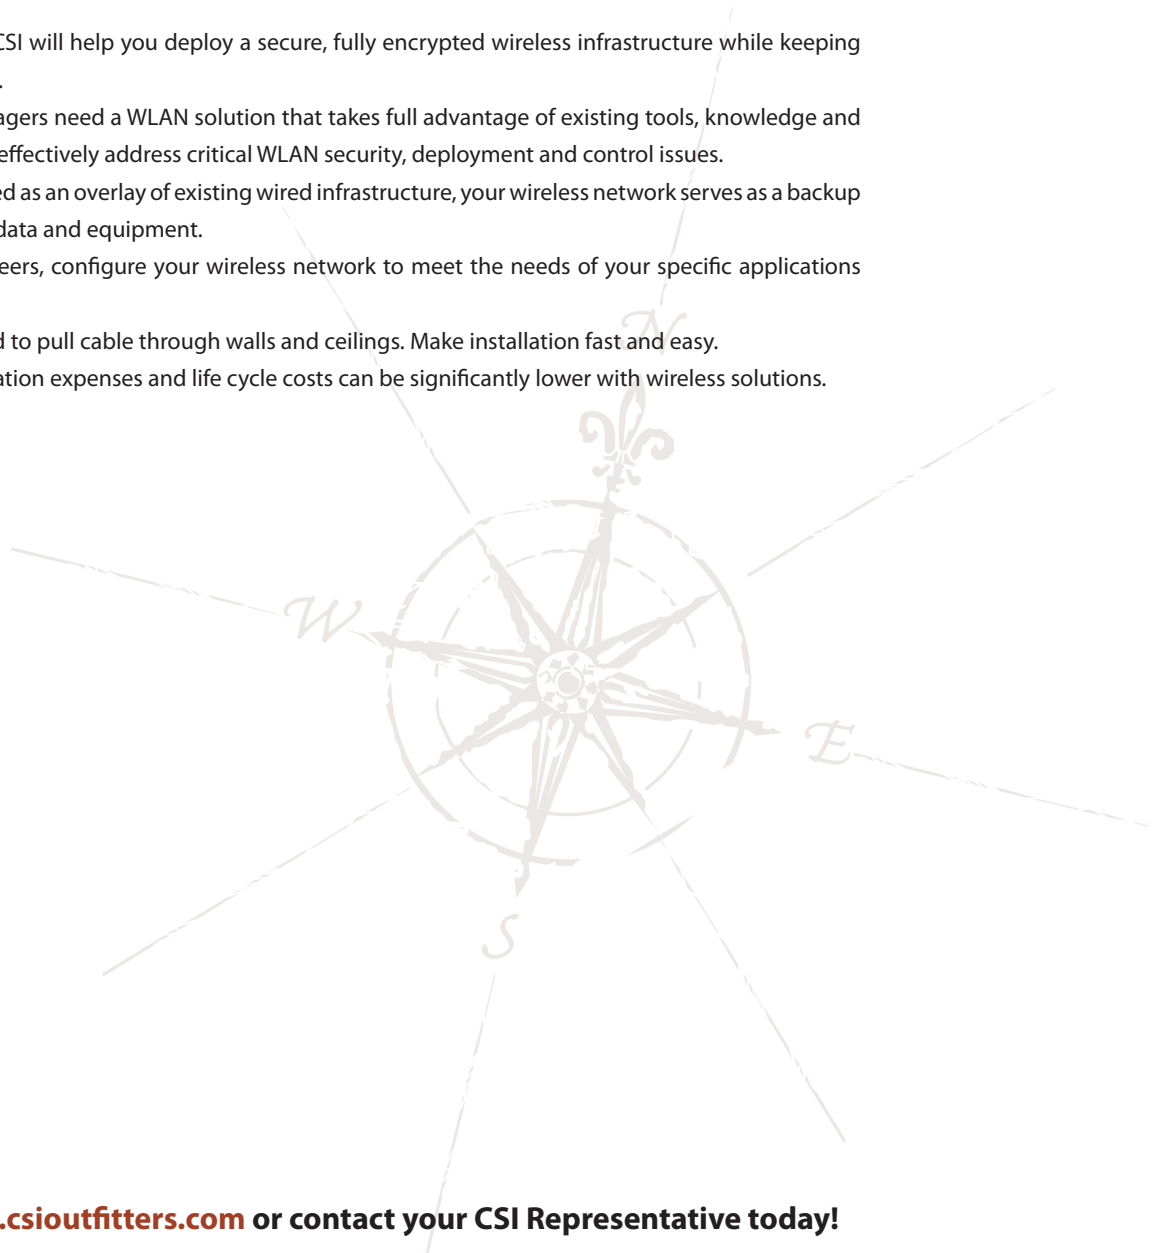

For network users, wireless technology means easier access to information

- **Mobile:** Wireless solutions provide network users with access to information outside the traditional office.
- **Productive:** You'll see an increase in productivity and service because you've improved the mobility of those who access your network.
- **Accurate:** Improve the accuracy of data through instant access of real-time information.
- **Flexible:** Now your network will go where wires and cables don't.

For administrators, our affordable wireless solutions enhance network accessibility

- **Expansive:** With proper design, wireless networks can reach distances up to several miles.
- **Fast:** Our wireless solutions are designed so that you don't have to sacrifice speed for mobility.
- **Reliable:** Ensure reliable Quality of Service (QoS) with a site survey, so that you'll have no overlapping channels or dropped signals.
- **Secure:** The engineers at CSI will help you deploy a secure, fully encrypted wireless infrastructure while keeping your wired network secure.
- **Integrated:** Network managers need a WLAN solution that takes full advantage of existing tools, knowledge and network resources to cost-effectively address critical WLAN security, deployment and control issues.
- **Redundant:** When designed as an overlay of existing wired infrastructure, your wireless network serves as a backup system for mission critical data and equipment.
- **Scalable:** With CSI's engineers, configure your wireless network to meet the needs of your specific applications and installations.
- **Simple:** Eliminate the need to pull cable through walls and ceilings. Make installation fast and easy.
- **Affordable:** Overall installation expenses and life cycle costs can be significantly lower with wireless solutions.
